DETAILED ACTION

Allowable Subject Matter

1. Claims 1-12 are allowed.

The following is an examiner's statement of reasons for allowance:

The present inventions is directed to an apparatus and a method to process upper half bits and lower half bits of input data in a round operation transformation unit which consist of shift-row, substitution, mixcolumn and add-round key for encryption process and inverse shift-row, inverse substitution, inverse mixcolumn and add-round key for decryption process in an Rijndael block cipher apparatus.

Independent claims 1, 3, 5, 9, and 11 recite the uniquely distinct features of "wherein the round keys generated in round key generation unit is added to an upper M/m input data in the round operation execution unit while simultaneously begin the processing of a lower M/m input data in the round operation execution unit at a same clock cycle without the upper M/m input data and the lower M/m input being processed in any one of a same transform of the transforms comprising of at least the substitution, mixcolumn, and add-round-key. wherein the end stage of every round indicate4s that the data in the unit of M/m bits (where m is 2, 3, or 4) have been processed in all of the at least transforms of substitution, mixcolumn and add-round-key, and wherein the processing of the upper M/m input data and the lower M/m input data are transformed in a same manner of a same circuit for each of the at least transforms of the substitution, mixcolumn and add-round-key".

The closest prior art, Yang (US Patent Publication no.: 2002/0131588), and Kim (US Patent No.: US 6,246,768 B1) discloses a Rijndael cipher apparatus that fails to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
